## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 15-23, drawn to antibodies, classified in class 530, subclass 387.9.
- II. Claims 24-31, drawn to methods of treatment using the antibodies of Invention I, classified in class 424, subclass 139.1.
- III. Claims 32-36, drawn to antisense nucleic acids and use thereof, classified in class 536, subclass 24.5 for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the antibodies may be used in a column for purification of CTGF protein

Invention I and II are each unrelated to Invention III. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, antibodies and antisense molecules have different chemical structures and functions/effects. The antisense of Invention III is unrelated to the methods of Invention II as the products are neither made by nor used in the methods. Accordingly, restriction is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

*Election of Species*

Should applicant elect Invention II above, a further election of species is required.

This application contains claims directed to the following patentably distinct species: dermatofibromas, breast carcinoma desmoplasia, angioliipoma, angioleiomyoma, kidney fibrosis, scleroderma, pulmonary fibrosis, arthritis, hypertrophic scarring, and atherosclerosis. The species are independent or distinct because each individual medical condition requires separate search and consideration of the art to determine whether CTGF is known or expected to be associated with that particular condition.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 24 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
